'Cliff deal' may not lift economy

Higher taxes, expected fight over debt ceiling impede progress, economists say

WASHINGTON — Housing is rebounding. Families are shrinking their debts. Europe has avoided a financial crackup. And the fiscal cliff deal has removed the most urgent threat to the U.S. economy.

So why don't economists foresee stronger growth and hiring in 2013?

Part of the answer is what Congress' agreement did (raise Social Security taxes for most of us). And part is what it didn't do (prevent the likelihood of more growth-killing political standoffs).

By delaying painful decisions on spending cuts, the deal assures more confrontation and uncertainty, especially because Congress must reach agreement later this winter to raise the government's debt limit. Many businesses are likely to remain wary of expanding or hiring in the meantime.

One hopeful consensus: If all the budgetary uncertainty can be resolved within the next few months, economists expect growth to pick up in the second half of 2013.

"We are in a better place than we were a couple of days ago," Chad Moutray, chief economist for the National Association of Manufacturers, said a day after Congress sent President Barack Obama legislation to avoid sharp income tax increases and government spending cuts. But "we really haven't dealt with the debt ceiling or tax reform or entitlement spending."

Five full years after the Great Recession began, the U.S. economy is still struggling to accelerate. Many economists think it will grow a meager 2 percent or less this year, down from 2.2 percent in 2012. The unemployment rate remains a high 7.7 percent. Few expect it to

drop much this year.

Yet in some ways, the economy has been building strength. Corporations have cut costs and have amassed a near-record $1.7 trillion in cash. Home sales and prices have been rising consistently, along with construction. Hiring gains have been modest but steady. Consumer confidence has been rising.

The economy might be growing at a 3 percent annual rate if not for the threat of sudden and severe spending cuts and tax increases, along with the haziness surrounding the budget standoff, said Ethan Harris, co-director of global economics at Bank of America Merrill Lynch.

Still, Congress' deal delivered a walloping tax hike for most workers: the end of a two-year Social Security tax cut. The tax is rising back up to 6.2 percent from 4.2 percent. The increase will cost someone making $50,000 about $1,000 a year and a household with two high-paid workers up to $4,500.

Mark Zandi, chief economist at Moody's Analytics, calculates that the higher Social Security tax will slow growth by 0.6 percentage point in 2013. The other tax increases — including higher taxes on household incomes above $450,000 a year — will slice just 0.15 percentage point from growth, Zandi says.

Congress' deal also postpones decisions on spending cuts for military and domestic programs, including Medicare and Social Security. In doing so, it sets up a much bigger showdown over raising the government's borrowing limit. Republicans will likely demand deep spending cuts as the price of raising the debt limit, currently at $16.4 trillion. A similar standoff in 2011 brought the government to the brink of default and led Standard & Poor's to yank its top AAA rating on long-term U.S. debt.

Here's how key parts of the economy are shaping up for 2013:

Employment pace still slow

With further fights looming over taxes and spending, many companies aren't likely to step up hiring.

Many economists expect employers to add an average of 150,000 to 175,000 jobs a month in 2013, about the same pace as in 2011 and 2012. That level is too weak to quickly reduce unemployment.

The roughly 2 million jobs Zandi estimates employers will add this year would be slightly more than the 1.8 million likely added in 2012. Zandi thinks employers would add an additional 600,000 jobs this year if not for the measures agreed to in the fiscal cliff deal.

Federal Reserve policymakers have forecast that the unemployment rate will fall to 7.4 percent, at best, by year's end. Economists regard a "normal" rate as 6 percent or less.

Consumer spending uncertain

Consumer confidence fell in December as Americans began to fear the higher taxes threatened by the fiscal cliff. Confidence had reached a five-year high in November, fueled by slowly declining unemployment and a steady housing rebound. Consumer spending is the driving force of the economy.

But the deal to avoid the cliff won't necessarily ignite a burst of spending. Taxes will still rise for nearly 80 percent of working Americans because of the higher Social Security tax rate.

Since the recession officially ended in June 2009, pay has barely kept up with inflation.

Thanks to record-low interest rates, consumers have whittled their debts to about 113 percent of their after-tax income. That's the lowest share since mid-2003, according to Haver Analytics.

Housing outlook strong

Economists are nearly unanimous about one thing: The housing market will keep improving.

That's partly because of a fact that's caught many by surprise: Five years after the housing bust left a glut of homes in many areas, the nation doesn't have enough houses. Only 149,000 new homes were for sale at the end of November, the government has reported. That's just above the 143,000 in August, the lowest total on records dating to 1963. And the supply of previously occupied homes for sale is at an 11-year low.

"We need to start building again," said Patrick Newport, an economist at IHS Global Insight.

Sales of new homes in November reached their highest annual pace in 2½ years. They were 15 percent higher than a year earlier. And October marked a fifth straight month of year-over-year price increases in the 20 major cities covered by the Standard & Poor's/Case-Shiller national home price index.

Manufacturing slowly recovers

Factories appear to be recovering slowly from a slump last fall. The Institute for Supply Management's index of activity rose last month from November. And a measure of employment suggested that manufacturers stepped up hiring in December. Factories had cut jobs in three of the four months through November, according to government data.

Also, auto sales will likely rise nearly 7 percent in 2013 over last year to 15.3 million, according to the Polk research firm. Sales likely reached 14.5 million last year, the best since 2007. In 2009, sales were just 10.4 million, the fewest in more than 30 years.
