

# Hospital renovating for new imaging center

**SENECA** — Oconee Medical Center began renovating its radiology department and imaging center on June 27 in order to construct a new Women's Imaging Center.

**The renovations are expected to last throughout the summer and be completed by the first of September.**

The Women's Imaging Center is being built to house a new digital mammography system, the MAMMOMAT Inspiration, recently won in a contest sponsored by Siemens. The services available to female patients will include mammography services, ultrasound, stereotactic biopsy services and bone density testing.

The Women's Imaging Center's location in the Oconee Medical Center's radiology department will provide a convenient, comfortable, private, patient-friendly setting.

Patients coming for imaging services can expect minor inconveniences until the renovations are complete.

"We are confident that the end result will be a more convenient, pleasant experience for patients having screening and diagnostic imaging studies," said Nate Farrar, director of radiology and cardiology services.
