# Multiple grad school programs land Clemson in ranks of 'nation's best'

## Magazine lists eight engineering studies in top 40 for public colleges

Eight graduate engineering programs at Clemson University are listed among the nation's best in a ranking released Thursday by U.S. News & World Report.

Clemson's environmental engineering program came in at No. 30 overall and was 19th among public institutions, while its biomedical/bioengineering program was 43rd overall and 22nd among public institutions.

Clemson's civil engineering, computer engineering, mechanical, chemical, industrial and electrical engineering programs also were in the top 40 among public universities.

"Having eight of our graduate degree programs ranked among the top 40 in U.S. News & World Report, with three in the top 25, underscores Clemson's reputation as a top engineering school," said Esin Gulari, dean of the College of Engineering and Science.

"This also underscores that Clemson graduate students are conducting top-quality research and receiving a high-quality, world-class education."

The report ranked programs at 189 engineering schools based on surveys of their peers and corporate recruiters, test scores, faculty resources, student-faculty ratio, doctoral degrees awarded and other criteria.
